

DELIVERABLE: D14 - D3.1

3D Matrix

Version: 3

Data: 26/03/2019

WP Leader: CSA - CENTRO SERVIZI AZIENDALE

Authors: CSA - CENTRO SERVIZI AZIENDALE

Review Contribution: Claudio Rosso - Liliana Bonfiglio (CSA - Centro Servizi Aziendale) - Anna Moreno - Christian Girardello (ENEA)

Network for Using BIM to Increase the Energy Performance

Grant Agreement Number: 754016
Net-UBIEP H2020

www.net-ubiep.eu
netubiep.project@net-ubiep.eu

This project has received funding from
the European Union's Horizon 2020
research and innovation programme
under grant agreement No.754016

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 754016.

This deliverable reflects only the author's view. The Agency is not responsible for any use that may be made of the information it contains.

The present deliverable will be update during the project in order to align the outcome to the market needs as well as to other BIM related projects realized within Horizon 2020 program.

The updated version of the deliverable will be only available in the website of the project www.net-ubiep.eu.

Some deliverables could also be translated in partners national languages and could be find in the respective national web pages. Click on the flags to open the correspondence pages:

EQF LEVELS

LEGEND:

	KNOWLEDGE	SKILLS	RESPONSABILITY AND AUTONOMY
	In the context of EQF, knowledge is described as theoretical and/or factual.	In the context of EQF, skills are described as cognitive (involving the use of logical, intuitive and creative thinking) and practical (involving manual dexterity and the use of methods, materials, tools and instruments).	In the context of the EQF responsibility and autonomy is described as the ability of the learner to apply knowledge and skills autonomously and with responsibility
Level 1 The learning outcomes relevant to Level 1 are	basic general knowledge	basic skills required to carry out simple tasks	work or study under direct supervision in a structured context
Level 2 The learning outcomes relevant to Level 2 are	basic factual knowledge of a field of work or study	basic cognitive and practical skills required to use relevant information in order to carry out tasks and to solve routine problems using simple rules and tools	work or study under supervision with some autonomy
Level 3 The learning outcomes relevant to Level 3 are	knowledge of facts, principles, processes and general concepts, in a field of work or study	a range of cognitive and practical skills required to accomplish tasks and solve problems by selecting and applying basic methods, tools, materials and information	take responsibility for completion of tasks in work or study adapt own behaviour to circumstances in solving problems
Level 4 The learning outcomes relevant to Level 4 are	factual and theoretical knowledge in broad contexts within a field of work or study	a range of cognitive and practical skills required to generate solutions to specific problems in a field of work or study	exercise self-management within the guidelines of work or study contexts that are usually predictable, but are subject to change supervise the routine work of others, taking some responsibility for the evaluation and improvement of work or study activities
Level 5 The learning outcomes relevant to Level 5 are	comprehensive, specialised, factual and theoretical knowledge within a field of work or study and an awareness of the boundaries of that knowledge	a comprehensive range of cognitive and practical skills required to develop creative solutions to abstract problems	exercise management and supervision in contexts of work or study activities where there is unpredictable change review and develop performance of self and others
Level 6 The learning outcomes relevant to Level 6 are	advanced knowledge of a field of work or study, involving a critical understanding of theories and principles	advanced skills, demonstrating mastery and innovation, required to solve complex and unpredictable problems in a specialised field of work or study	manage complex technical or professional activities or projects, taking responsibility for decision-making in unpredictable work or study contexts take responsibility for managing professional development of individuals and groups
Level 7 The learning outcomes relevant to Level 7 are	highly specialised knowledge, some of which is at the forefront of knowledge in a field of work or study, as the basis for original thinking and/or research critical awareness of knowledge issues in a field and at the interface between different fields	specialised problem-solving skills required in research and/or innovation in order to develop new knowledge and procedures and to integrate knowledge from different fields	manage and transform work or study contexts that are complex, unpredictable and require new strategic approaches take responsibility for contributing to professional knowledge and practice and/or for reviewing the strategic performance of teams
Level 8 The learning outcomes relevant to Level 8 are	knowledge at the most advanced frontier of a field of work or study and at the interface between fields	the most advanced and specialised skills and techniques, including synthesis and evaluation, required to solve critical problems in research and/or innovation and to extend and redefine existing knowledge or professional practice	demonstrate substantial authority, innovation, autonomy, scholarly and professional integrity and sustained commitment to the development of new ideas or processes at the forefront of work or study contexts including research

Network for Using BIM to Increase the Energy Performance

List of Competences

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No.754016

BIM Manager

Strategic Definition

N	Competence	EQF Level							
C0	Have basic BIM knowledge and skills	1	2	3	4	5	6	7	8
C0.K1	BIM basic concepts, terminology, principles, strategies and its value proposition								
C0.K2	Benefits and uses of BIM compared to traditional methods for improving energy efficiency of new or existing buildings								
C0.K3	Project information development cycle: information specification, development, exchange and maintenance throughout all the building life cycle								
C0.K4	Reasons for open and interoperable solutions to ensure collaboration among professionals of different disciplines								
C0.K5	Methodology to identify, plan, develop and evaluate organization's BIM implementation capabilities and BIM uses								
C0.K6	Relevance of maintenance for maintaining the foreseen energy performance								
C0.S1	Read a BIM Execution Plan (BEP)								
C0.S2	Read a Information Delivery Manual								
C0.S3	Identify information requirements for his own role								
C0.S4	Identify the format to read information and transfer information within the supply chain								
C0.S5	Identify the EIR (Employer Information Requirements)								
C0.S6	Identify and/or verify the stages of PIM (Project Information Management)								
C1	Understand BIM tools								
C1.K1	Principle of economic subjects for the cost estimation and evaluation of energy refurbishment								
C1.S1	Specialised skills to incorporate information into BIM Model, evaluating openBIM software								
C1.S2	Stay up to date on BIM trends, current developments and new directions of BIM technologies								
C1.S3	Decrease the life cycle cost of the building using methods described in ISO 15686-5								
C1.S4	Evaluate and compare different plans and related Return of Investments using methods described in ISO 15686-5								
C2	Apply information management

BIM Coordinator

Concept Design

N	Competence	EQF Level							
		1	2	3	4	5	6	7	8
C2.K4	Principle of information management in building sustainability and lean design								
C2.S2	Identify which graphic and/or non-graphic information are necessary for a better management of works and for define the completeness of the Information Delivery Plan in relation to								
C2.S3	Archive the model ensuring that the information provided is kept intact and not manipulated for any future use								
C2.S7	Identify requirements for the management of data in the CDE (Common Data Environment) for any professionals involved in the process								
C2.S8	Transfer building information using BIM to facility managers and final users								
C2.S12	Develop a CDE (Common Data Environment) to exchange data through the building life cycle as well as through the supply chain								
C3	Apply procurement management								
C3.K3	Legal and technical aspects on green procurement, state and rules for using public funding and international good practices of energy performance contracting								
C3.K4	Strategies for training programs to increase energy efficiency with the support of BIM								
C3.S3	List and collaborate with several stakeholders who participate in the sustainable project, distinguishing roles/needs and involving them in the information delivery plan preparation								
C4	Use BIM technology								
C4.K1	Techniques and principles of integrated digital production and rendering								
C4.K3	Principle of planning and scheduling for BEP (BIM Execution Plan)								
C4.K4	Principles of interplays between all aspects of building design, building use and outdoor climate for dynamic evaluation								
C4.K5	Principles and systems of sustainable buildings, including renewable energy production								
C4.K6	Design techniques for different scenarios for new resilient buildings to future climate changes and for the refurbishment of existing buildings								
C4.K7	Techniques of automatic code checking and management of software e-permit								
C4.S1	Produce a digital 3D model of building / any BIM objects needed for the library in the Common Data Environment								
C4.S2	Develop a BEP (BIM Execution Plan)								
C5	Analyse the BIM Model

C0.S4	Identify the format to read information and transfer information within the supply chain							
C0.S5	Identify the EIR (Employer Information Requirements)							
C0.S6	Identify and/or verify the stages of PIM (Project Information Management)							
C1	Understand BIM tools							
C1.S1	Specialised skills to incorporate information into BIM Model, evaluating openBIM software							
C1.S2	Stay up to date on BIM trends, current developments and new directions of BIM technologies							
C2	Apply information management							
C2.K1	Principle of data mining, data base and back up in the CDE (Common Data Environment)							
C2.K2	Principle of data transferring among different software and/or data federating into an integrated design							
C2.K3	Principle of data security and administrative law in the archiving of data in a CDE (Common Data Environment)							

[illegible]

BIM Coordinator

Handover and Close Out

N	Competence	EQF Level						
C0	Have basic BIM knowledge and skills	1	2	3	4	5	6	7
C0.K1	BIM basic concepts, terminology, principles, strategies and its value proposition							
C0.K2	Benefits and uses of BIM compared to traditional methods for improving energy efficiency of new or existing buildings							
C0.K3	Project information development cycle: information specification, development, exchange and maintenance throughout all the building life cycle							
C0.K4	Reasons for open and interoperable solutions to ensure collaboration among professionals of different disciplines							
C0.K5	Methodology to identify, plan, develop and evaluate organization's BIM implementation capabilities and BIM uses							
C0.K6	Relevance of maintenance for maintaining the foreseen energy performance							
C0.S1	Read a BIM Execution Plan (BEP)							
C0.S2	Read a Information Delivery Manual							
C0.S3	Identify information requirements for his own role							
C0.S4	Identify the format to read information and transfer information within the supply chain							
C0.S5	Identify the EIR (Employer Information Requirements)							
C0.S6	Identify and/or verify the stages of PIM (Project Information Management)
