

DELIVERABLE: D40 - D6.7 **International Net-UBIEP events**

Version: 4
Date: 15/04/2020

WP Leader: CSA – CENTRO SERVIZI AZIENDALE
Authors: Anna Moreno, Christian Girardello – ENEA Claudio Rosso CSA

Network for Using BIM to Increase the Energy Performance

Grant Agreement Number: 754016
Net-UBIEP H2020

A. Deliverable Details

| | |
|------------------------------|---|
| Document Reference #: | D40 – D6.7 |
| Title: | International Net-UBIEP events |
| Version Number: | 04 |
| Preparation Date: | April 15, 2020 |
| Delivery Date: | |
| Author(s): | Anna Moreno, Christian Girardello (ENEA) |
| Contributors: | Claudio Rosso (CSA) |
| Work Package | 6 – DISSEMINATION, EXPLOITATION AND CAPITALIZATION OF BIM QUALIFICATION MODEL |
| Type of deliverable | Report |
| Format | PDF |
| Dissemination Level: | Public |

B. Short Description

The activity performed during two European events and one international event, are described. All the three events have promoted the qualification schemes in connection with the partnership with other three European projects related to the use of BIM for improving energy performance: BIMCERT, BIMPLEMENT, BIMEET. The events occurred in Dusseldorf in March 2019, in Barcelona in May 2019 and in Brussels in June 2019.

SUMMARY

- 1. OTMC – Poreč 27-30 September 2017 5
 - 1.1 Conference program..... 5
- 2. BIM 2017 – Zagreb 02 December 2017 8
 - 2.1 Flyer 8
 - 2.2 Photos 10
- 3. EnEff Workshop – 02 May 2018 11
 - 3.1 Agenda 11
 - 3.2 Photos 12
- 4. EURO 2018 conference – Dusseldorf 8-11 July 2018..... 13
 - 4.1 Extract from full program..... 13
- 5. BhENEFIT – Karlovac 11 September 2018..... 14
 - 5.1 Agenda 14
 - 5.2 Photos 16
- 6. InDIS – 21 November 2018..... 17
 - 6.1 Flyer 17
 - 6.2 Paper..... 18
- 7. Building SMART International summit – Dusseldorf March 2019..... 19
 - 7.1 Description of the event 19
 - 7.2 Achievements 19
- 8. RILEM SMSS – 20-22 March 2019..... 21
 - 8.1 Flyer 21
 - 8.2 Paper..... 22
 - 8.3 Presentation..... 23
 - 8.4 Photos 23
- 9. BIMalliance conference - Barcelona 16 may 2019 25
 - 9.1 Description of the event 25
 - 9.2 Agenda 26
 - 9.3 Presentation by ENEA 27
 - 9.4 Photos 28
- 10. Cr-Soc-Qual – 17 May 2019 29
 - 10.1 Paper..... 29

1. OTMC – Poreč 27-30 September 2017

1.1 Conference program

CONFERENCE PROGRAM

Conference venue: Hotel Parentium

Wednesday 27 Sep

| | |
|-------------------|---|
| | Afternoon arrivals |
| From 17:00 | Registration at the Conference lobby |
| 20:30 | Welcome drink at the Conference Lobby |

Thursday 28 Sep

| Conference Room | Plenary hall: Laguna |
|-----------------|---|
| 09:00 – 09:30 | Opening ceremony Anita Cerić, Head of Department of Construction Management and Economics, University of Zagreb, Faculty of Civil Engineering Jesus Martinez Almeida, IPMA President-elect for years 2018-2020 Maja Marija Nahod, Assistant Minister for Construction and Energy Efficiency in Buildings Sector at Ministry of Construction and Physical Planning Ivica Završki, Chairman of OTMC2017 Conference, Croatian Association for Construction Management |
| 09:30 – 10:15 | Keynote 1: Project management: Get ready for the digital age MARTINA HUEMANN WU Vienna University of Economics and Business |

| 10:15 – 11:00 | Keynote 2: Applying Policy-led Multi-Criteria Analysis to the Appraisal of Mega Infrastructure Projects HARRY T. DIMITROU University College London (UCL) OMEGA Research Centre and OMEGA Centre Consultants (UCLC Ltd.) BRIAN FIELD Urban Planning and Development at the European Investment Bank (EIB) | | | |
|-------------------------------|---|--|--|---------------|
| 11:00 – 11:30 | Coffee break at the hotel lobby | | | |
| Conference Room | Laguna 1 | Laguna 2 | Laguna 3 | Zelena laguna |
| Track 11:30 – 13:00 | Construction and Project Management Issues | General Management and Economics in Construction | IPMA Megaprojects SIG | |
| Facilitator | Ivica Završki | Anita Cerić | Mladen Radujković | |
| 11:30 – 11:45 | <i>Project Implementation Units of EU co-financed Water Projects</i> Robert Kartelo, Mariela Sjekavica, Mladen Radujković | <i>World Quality Management Trends Implemented into Construction Company</i> Jozef Gasparik, Marian Gasparik | <i>Rail Baltica – Project of the Century</i> Baiba Rubesa | |
| 11:45 – 12:00 | <i>The Impact of Risk on Bid Price and Project Budget for Contractors</i> Ladislav Bevanda, Marin Nikolic | <i>Value Engineering in Construction Projects – a Challenge to Contractor</i> Ksenija Čulo, Vladimir Skendrović | | |
| 12:00 – 12:15 | <i>Cost Optimal Time Scheduling Integrating Spreadsheet and Project Management Software</i> Tadej Valenko, Uroš Klanšek | <i>Effect of MMC Selection on Construction Costs</i> Alena Tazikova, Maria Kozlovskva, Zuzana Strukova | | |
| 12:15 – 12:30 | <i>Application of ERP Systems within Construction Industry and Probable Directions of Further Research</i> Sonja Kolaric, Mladen Vukomanović | <i>Mass Evaluation Pilot Study as Investment Courage</i> Maja-Marija Nahod, Željko Uhlir | <i>Human Factors – a Key Success Factor</i> Peter Jedelhauser | |
| 12:30 – 12:45 | <i>Unit Price Ranges in Building Construction</i> Vincent Wapelhorst, Ivan Cadež | <i>Private Public Partnerships on Local Community Level in Slovenia</i> Valentina Kuzma, Jana Selih, Aleksander Srdić | | |

| | | | | |
|---|--|--|---|--|
| 12:45 – 13:00 | <i>Risk Management of the Complex Construction Project – The New Cruise and Ferry Port of Zadar</i> Igor Pukec, Diego Chersi, Tomislav Rastovski | <i>Life-Cycle Costs in Economic Analysis of Road Infrastructure Projects</i> Vit Hromadka, Eva Vitkova | | |
| 13:00 – 14:00 Lunch at the hotel restaurant | | | | |
| Conference Room | Laguna 1 | Laguna 2 | Laguna 3 | Zelena Laguna |
| Track 14:00 – 15:30 | Construction and Project Management Issues | General Management and Economics in Construction | IPMA Megaprojects SIG | OTMC Croatian Session |
| Facilitator | Diana Car-Pušić | Zlata Dolaček-Alduk | Mladen Radujković | Ivana Burcar Dunović |
| 14:00 – 14:15 | <i>Role of Management Performance Feedback on Performance</i> Ossi Pesämaa, Johan Larsson, Per-Erik Eriksson | <i>Economic Comparison of Construction Costs of Buildings from Renewable Materials and Traditional Materials in the Czech Republic</i> Lukáš Labudek, Alena Tichá, Prák Michal, Veronika Roudná | <i>Comparing Complexity across Different Industry Sectors</i> Marcel Hertogh | <i>Primjena PUG i FIDIC-a u građevinskim sporovima</i> Mičo Ljubenko |
| 14:15 – 14:30 | <i>Application of S-curve in EVA method</i> Ksenija Tijić, Diana Car-Pušić | <i>Capability Strings – Building Relational Capabilities through Set of Cross-Organizational Threads in Industrial Construction</i> Josip Sertić, Ivica Završki | | <i>Impact of the Project Management Process on the Quality of The Final Product in the Definition and Planning Phase</i> Zaneta Ljevo, Mladen Vukomanović, Nerman Rustempašić |
| 14:30 – 14:45 | <i>Challenges in Implementing Systemic Innovation in Transport Infrastructure Projects</i> Johan Larsson, Per-Erik Eriksson, Andreas Udén | <i>Mapping the Issue of Water Supply Network and Sewerage Systems in the Czech Republic</i> Alena Tichá, Gabriela Kocourková, Dagmar Hrabincová, Dana Linkeschová, | <i>On the Success of Megaprojects</i> Rodney Turner | <i>Model procjene tržišne vrijednosti stanova nakon energetske obnove</i> Ratko Matotek |
| 14:45 – 15:00 | <i>Organizational Improvisation in Contracting Firms: A Capability for Overcoming the Project Complexities</i> Ibrahim Yilmaz, Gozde Basak Ozturk | <i>Is Ethical Behavior Profitable in Construction? A Theoretical Framework</i> Miljenko Antić | | <i>Podizanje razine znanja o kulturi građenja kroz e-učenje</i> Borka Bobovec |
| 15:00 – 15:15 | <i>Re-investigating Approaches on Defining Stakeholder Characteristics</i> Kristijan Robert Prohancić, Ivana Burcar Dunović | <i>Impact of ERP Systems on Cost Reducing in Construction Project Management in Slovakia</i> Peter Mesáros, Tomáš Mandičák | <i>Impacts of Oil & Gas Mega Projects on the Society around Them</i> Gholamreza Safakish | <i>Risks in the Construction of Highways in the Republic of Croatia in the Context of Research Cost Overruns</i> Marijo Lovrinčević, Mladen Radujković, Mladen Vukomanović |

| | | | | |
|---|--|---|--|---|
| 15:15 – 15:30 | <i>A Comparison between Early Contractor Involvement (ECI) and Project Alliances Delivery Systems</i> Farshid Rahmani | <i>The Application of Design Science Approach to AEC Research</i> Jose Oliveros | | <i>Odabir optimalnog strojnog sustava na projektima s izraženim zemljanim radovima</i> Luka Štrbol, Zvonko Sigmund, Mladen Vukomanović |
| 15:30 – 16:00 Coffee break at the hotel lobby | | | | |
| Conference Room | Laguna 1 | Laguna 2 | Laguna 3 | Zelena Laguna |
| Track 16:00 – 17:00 | Building Information Modeling | General Management and Economics in Construction | IPMA Megaprojects SIG | |
| Facilitator | Iva Kovačić | Uroš Klanšek | Mladen Radujković | |
| 16:00 – 16:15 | <i>BIM Educational Activities on Civil Engineering Faculty Technical University of Košice</i> Renata Baskova, Maria Kozlovskaja, Alena Tazikova, Andrej Narjas | <i>Mediation as a Tool for Conflict Management and Extrajudicial Dispute Resolution in Construction</i> Srdan Šimac | <i>Round table: Megaprojects Success</i> | |
| 16:15 – 16:30 | <i>Applicability of BIM Kiosk on Construction Sites</i> Martina Pavlović, Mladen Vukomanović | <i>A Comparative Analysis of the Croatian System of Energy Efficiency Measures</i> Ivana Šandrk Nukić, Ivana Čandrić Dankoš, Mihaela Teri | | |
| 16:30 – 16:45 | <i>Use of Building Information Modelling and Other Advanced Technologies for Monitoring Construction Progress</i> Matej Mihčić, Ivica Završki, Karlo Barulek | <i>International Performance of Croatian Construction Companies</i> Lana Lovrenčić Buljković, Mariza Katavić | | |
| 16:45 – 17:00 | <i>The Vico Office Software for the 4D and 5D Information Modelling for Building External Walls of the Residential Block in Ljutomer</i> Anja Pavličić, Nataša Suman, Zoran Pučko | <i>Improving Performance of Building Construction Projects: A New Approach of Labor Productivity Benchmarks</i> Odysseas Manoladis, Alexandros Hatzigeorgiou | | |
| 17:00 | End of day | | | |
| 20:00 | OTMC dinner – restaurant Bacchus / hotel Parentium | | | |

Friday 29 Sep

| Conference Room | Laguna 1 | Laguna 2 | Laguna 3 | Zelena Laguna |
|-------------------------------|---|--|---|---|
| Track 09:00 - 10:30 | Building Information Modeling | Sustainability in the Built Environment Construction Design and Technology Research and Education in Construction | IPMA Megaprojects SIG | Research Workshop Presentation of the selected papers |
| Facilitators | Nives Ostojčić Škomrič | Nataša Šuman | Mladen Radujković | Anita Cerić & Martina Huemann |
| 09:00 - 09:15 | <i>Review of BIM's Implementation in European AEC Industries</i> Mario Galčić, Václav Venkrbáč, Franziska Chmelik, Immo Feine, Zoran Pučko, Uroš Klanšek | <i>Comparison of Sustainability Reporting in Construction Industries of Slovenia and Croatia</i> Laura Fink, Judita Peterlin | 09:00 - 09:20 <i>Megaprojects in the Postal Sector: Deutsche Post / DHL and South African Post</i> Amin Saidoun | 09:00 - 09:25 <i>Potential of BIM and ERP Integration in Contractor Construction Companies</i> Sonja Kolaric, Mladen Vukomanović |
| 09:15 - 09:30 | <i>Recent Works and Activities on BIM Conducted at FCETEA in Maribor, Slovenia</i> Zoran Pučko, Nataša Šuman, Uroš Klanšek, Andrej Štrukelj | <i>Historical Town Centres - Challenges and Opportunities of Renewal</i> Martina Milat, Maja-Marija Nahod, Anita Cerić | 09:20 - 09:40 <i>Megaproject in Oil & Gas Sector: State of Art and Future Trends</i> Mauro Mancini | 09:25 - 09:50 <i>Ex-post Impact Evaluation Tool for Public Private Partnership Projects</i> Jose Oliveros |
| 09:30 - 09:45 | <i>BIM based Material Passport</i> Iva Kovacic, Meliha Honic, Helmut Rechberger | <i>Analysis Capital Expenditures of the Modern Methods for the Foundating of Family Houses</i> Tomáš Mandičák, Peter Mesároš, Juraj Taljan | 09:40 - 10:00 <i>Sejong Administrative City Construction and Project Management of the City</i> Eunsang Yoon | 09:50 - 10:15 <i>Impact of Project Complexity on Rewarding Project Teams for Construction Projects Execution</i> Marin Nikolic, Ivana Burcar Dunović |
| 09:45 - 10:00 | <i>Preliminary Results of BIM Awareness and Education among Students of Graduate Study Program in Construction Industry</i> Bernard Rajčić, Gabrijel Peroli, Marija Cindrić, Diana Car-Pušić, Ivan Marović | <i>Planning and Control of Productivity of Construction Machinery through Use of Wireless Technology</i> Martina Sopić, Mladen Vukomanović, Diana Car - Pušić | | |
| 10:00 - 10:15 | <i>Academic Teaching of BIM in Germany</i> Stefanie Brokbaus, Ivan Čadež | <i>Evaluation of Learning Outcomes at Civil Engineering Studies</i> Ivana Domljan, Aleksandra Deluka Tibjasić, Zlata Dolacek Alduk | 10:00 - 10:10 <i>Discussion</i> | |
| 10:15 - 10:30 | | | 10:10 - 10:20 <i>Governing Mega-Projects Using Special Purpose Entities (SPE)</i> Tristano Sainati | 10:15 - 10:40 <i>Alone or In Pairs: Agile Approach Improves Organizational Project Management Competences</i> Dragan Bjelica, Marko Milić, Vladimir Obradović |
| 10:20 - 10:30 | | | <i>Influence of Megaprojects on Community Development</i> Sandra Mišić | |
| 10:30 - 11:00 | Coffee break at the hotel lobby | | | |
| Conference Room | Laguna 1 | Laguna 3 | Zelena Laguna | |
| Track 11:00 - 12:15 | Round table 1 *in Croatian language | IPMA Megaprojects SIG | Research Workshop | |
| Facilitators | Mladen Vukomanović | Mladen Radujković | Anita Cerić & Martina Huemann | |
| | <i>Razvoj nacionalnih smjernica za primjenu Building Information Modeling (BIM)</i> <i>(Development of the National Guidelines for Implementing Building Information Modeling (BIM))</i> Govornici - Speakers: Ginanmarco Baldini, Baldinistudio d.o.o. Željka Jurković, Croatian Chamber of Architects Iva Kovacic, Faculty for Civil Engineering, Vienna University of Technology Maja Marija Nahod, Ministry of Construction and Physical Planning Martina Pavković, Intelika d.o.o. Zvonimir Sever, Croatian Chamber of Civil Engineers Hrvoje Solman, Arctis d.o.o. Matija Vinski, Arhitektura Vinski d.o.o. | <i>Round table:</i> <i>Megaprojects Serving the Needs of Community Development (Discussion & Development of Communiqué)</i> | <i>Workshop on Writing for Top Research Journals</i> | |
| 12:15 - 13:30 | Lunch at the hotel restaurant | | | |

2. BIM 2017 – Zagreb 02 December 2017

2.1 Flyer

B I M
2017
Z A G R E B

**II. međunarodna
B I M konferencija
Zagreb 2. prosinca**
: Velika dvorana
Arhitektonskog
fakulteta u Zagrebu
: od 10,00 sati

**Đorđe
Grujić**

M Arch. Eng.
Design Manager

Više od deset godina Đorđe je direktor projektiranja u City Diamond Contracting u Dubaiju. Boravak na Srednjem istoku je počeo kao direktor tehničkih usluga u AWATCO Graphisoft Middle East Centre, a potom je radio kao glavni arhitekt u Lootah Group. Diplomirao je na Arhitektonskom fakultetu Univerziteta u Beogradu sa zvanjem master inženjer arhitekture. Radio je u sedam zemalja na tri kontinenta, više od četvrtine vijeka. Većinom profesionalne karijere koristio je informatičke sisteme, počevši od CAD sistema 1989., do otkrivanja moći koncepta Virtualne Zgrade – danas poznatijeg kao BIM – 1995. Zato i kaže: BIM there, done that.

**Martin
Lah**

M.Sc.Civ.Eng.

Inženjer građevinarstva s 10 godina iskustva u primjeni metodologije BIM-a. Trenutno je odgovoran za sustavnu provedbu BIM metodologije u iC grupi tvrtki te u glavnim projektima infrastrukture i građevinarstva. Posebno za izradu internih BIM standarda, planiranje izvršenja BIM-a, 3D modeliranje, koordinaciju BIM-a (detekcija sudara), 4D i 5D modeliranje za procjenu troškova i kontrolu te PIM - upravljanje projektnim informacijama.

**Jorma
Ehnrooth**

Global Sales
Director

Jorma Ehnrooth radi kao globalni direktor prodaje tvrtke Solibri Inc i odgovoran je za globalnu prodajnu mrežu. Solibri se bavi osiguranjem i kontrolom kvalitete BIM-a. Omogućava dostupnost alata za provjeru valjanosti BIM-a, kontrolu uskladenosti, koordinaciju procesa projektiranja, pregled projekta, analizu i provjeru koda. Solibri surađuje s vlasnicima zgrada, građevinskih tvrtki, arhitektonskim i inženjerskim tvrtkama u više od 70 zemalja. Jorma je BIM zagovornik, predavač i bivši poslovni savjetnik te strastveni biciklist. Prezentacija će dati pregled tržišta u odnosu na BIM i ulogu osiguranja i kontrole kvalitete.

**BIM
2017
ZAGREB**

Program

9:30 – 10:00 | PRIJAVA SUDIONIKA

10:00 – 10:15 | POZDRAVNI GOVORI

10:15 – 11:00 | **ĐORĐE GRUJIĆ** M Arch Eng,
Design Manager, Dubai, PREDAVANJE : **BIM u
Ujedinjenim Arapskim Emiratomima**

11:00 – 11:15 | PITANJA I DISKUSIJA

11:15 – 12:00 | **MARTIN LAH** univ.dipl.inž.grad.,
Elea, Slovenija PREDAVANJE : **BIM menadžment
i koordinacija - primjeri iz prakse**

12:00 – 12:15 | PITANJA I DISKUSIJA

12:15 – 13:00 | PAUZA ZA ZAKUSKU

13:00 -13:45 | **JORMA EHRNROOTH** Global
Sales Director, Solibri Inc., Finland : **Osiguranje
i kontrola kvalitete BIM projekata**

13:45 – 14:00 | PITANJA I DISKUSIJA

14:00 – 14:15 | doc. dr. sc. **IVANA BURCAR
DUNOVIĆ** : **Korištenje BIM pristupa za
povećanje energetske učinkovitosti u
zgradama - projekt NET-UBIEP**

14:15 – 14:30 | **HRVOJE ŠOLMAN** dipl. ing. grad.
: **Hrvatska komora inženjera u graditeljstvu:
Prve hrvatske opće smjernice za BIM pristup
u graditeljstvu**

14:30 – 14:45 | **MATIJA VINSKI**, dipl. ing. arh.
: **BIM smjernice Hrvatske komore arhitekata**

14:45 – 15:15 | OKRUGLI STOL

15:15 – 15:30 | ZAKLJUČCI KONFERENCIJE

Kotizacija za sudjelovanje na Konferenciji iznosi **150,00 kn (120,00 kn + PDV)**, a potrebno ju je uplatiti prema sljedećoj uputi:

HKA Okvir d.o.o.
Ulica grada Vukovara 271/2
10 000 Zagreb
IBAN: HR272360001102517404
OIB: 44469728480
MODEL: 00
POZIV NA BROJ ODOBRENJA: 02122017
SVRHA UPLATE: BIM 2017, ime i prezime polaznika koji se prijavljuje

Nakon prijave, molimo pošaljite ispis naloga o uplaćenju kotizacije na **ssu@arhitekti-hka.hr**.

Konferencija je uvrštena u Program stručnog usavršavanja HKA-a, sa šest (6) sati HKA SU standarda.

3. EnEff Workshop – 02 May 2018

3.1 Agenda

POZIV za informativnu radionicu za predstavnike javnog sektora Zgrade gotovo nulte energije (ZG0E)

Od 2019. godine sve zgrade javne namjene moraju biti izgrađene po principu zgrada gotovo nulte energije koji nameće nove standarde gradnje i nove zahtjeve pred investitore.

Zadovoljstvo nam je pozvati Vas na radionicu koja će se **22. svibnja 2018. godine održati u HGK-Županijskoj komori Varaždin (Petra Preradovića 17, 3. kat)** na kojoj ćemo predstavnicima javnog sektora prezentirati zahtjeve gradnje i obnove zgrada javnih namjena prema novom zakonodavstvu.

Prijavu molimo izvršiti do 21. svibnja 2018 na adresu e-pošte rpapac@hgk.hr.

Program

| | |
|---------------|--|
| 9:30 - 10:00 | Registracija i kava |
| 10:00 - 10:15 | Pozdravni govor i prezentacija projekta EN-EFF HGK-Županijska komora Varaždin |
| 10:15 - 10:30 | nZEB u Hrvatskoj Damir Mandić, Regionalna Energetska Agencija Sjever, Koprivnica |
| 10:30 - 11:00 | Kako graditi i obnavljati zgrade do ZG0E? Zašto BIM? doc.dr.sc. Bojan Milovanović, Građevinski fakultet Zagreb |
| 11:00 - 11:30 | Case study - Tehnološki park Varaždin II Zdenka Šarolić, Studio Nexar d.o.o. Ivanec |
| 11:30 - 12:00 | Termografsko snimanje doc. dr. sc. Bojan Milovanović, Građevinski fakultet Zagreb |
| 12:00 - 12:15 | Pitanja |
| 12:15 – 14:00 | Ručak za sudionike |

Radionica je aktivnost projekta EN-EFF- Novi koncept treninga za energetska učinkovitost, sufinanciranog iz programa Interreg Mađarska-Hrvatska.

Radujemo se Vašem dolasku!

4. EURO 2018 conference – Dusseldorf 8-11 July 2018

4.1 Extract from full program

MB-51

EURO 2018 - Valencia

City performance assessment methods are beneficial to provide support for decision making in urban development. The fast growth of urbanisation creates concerns about the sustainability of cities. The smart city frameworks are mainly focusing on modern technologies and smartness in the smart city rather than urban sustainability. Moreover, the urban sustainability frameworks focus environmental sustainability. Therefore, smart city frameworks are lack of environmental indicators while focusing on mainly economic and social aspects. However, the focus of smart cities is to improve sustainability with the support of technology. Hence there is a gap between smart city and sustainable city frameworks. To overcome this gap, we propose a framework which can explain smart sustainable city from three main perspectives: economic, social and environmental. To assess the efficiency of urban sustainability and smart city efficiencies the traditional Data Envelopment Analysis (DEA) used. However, the traditional DEA treats Decision Making Units (DMUs) as a black box by only considering initial inputs consumed and final outputs produced by them. Therefore, the traditional DEA models cannot sufficiently characterize the performance of cities. Apart from the need for a new framework, there is also a lack of understanding of how cities main three sub-systems: environment, economy, resources, and energy should be assessed, considered and their impact on the efficiency of urban sustainability.

■ MB-51

Monday, 10:30-12:00 - 4D UPV 1.2

OR for Sustainable Built Environment

Stream: OR for Sustainable Development

Chair: *Tatjana Vilutiene*

1 - Optimum design of bridges considering long-term criteria

Tatiana Garcia-segura, Víctor Yepes, Eugenio Pellicer, Laura María Montalbán Domingo

Multi-objective optimization is a commonly used tool to find multiple trade-off solutions. However, a large computational time is needed to check the solutions to certain structural problem. This communication presents a meta-model assisted multi-objective optimization to optimize bridges under multiple objectives. Artificial neural networks (ANNs) are integrated in the multi-objective optimization to reduce the high computational cost required to evaluate the constraints of a real bridge optimization problem. ANNs are trained to predict the structural response in terms of the limit states based on the design variables, without analyzing the bridge response. This methodology is applied to a continuous post-tensioned concrete box-girder road bridges formed by 34 variables regarding the geometry, the concrete grade and the reinforcing and prestressing steel. The objective is to find the optimal bridge design so that the cost of the deck is minimized and the overall safety factor with respect to the ultimate limit states and the corrosion initiation time due to chloride is maximized. The corrosion initiation time and safety criteria are included as objective functions for further deepening in the durability and safety requirements with the aim of designing for longevity and reduced long-term impacts.

2 - Integrated advanced technologies for sustainable BIM-based building refurbishment

Jovita Starynina, Leonas Ustinovichius, Mantas Vaisnoras

Building Information Modelling (BIM) is a collaborative way of working, supported by digital technologies. Computer model that has several 'dimensions' can be used for effective management of information throughout a project lifecycle - from the earliest concept of operation. BIM-based processes are 'mainstream' for new buildings and infrastructure and have potential in sustainable refurbishment projects when complementary workflows such as building scanning. Despite the fast development and spreading standards, challenging research opportunities arise from process automation and BIM adaptation for existing buildings' requirements. To aid decision-making, building simulation

is widely used in the late design stages, but its application is still limited in the early stages in which design decisions have a major impact on final building performance. Using building scanning visualization in early design stage helps fully assess the environment of the future, accept design solutions, prevent mistakes and provides rapid changes of the design. 3D scanning technology is simply an incremental technological advancement of surveying, providing a safer, richer and more rapid method of spatial data acquisition for surveying applications. 3D laser scanning or 3D reality meshes from photographs data brings myriad opportunities to project managers, and engineers to monitor, assess, and analyse physical data captured from the existing environment.

3 - Empirical study of BIM-based building life cycle: case of Net-UBIEP project

Tatjana Vilutiene, Arvydas Kiaulakis

The building sector is the largest consumer of energy in Europe, accounting for nearly 40% of the total consumption (EPBD 2010/31/EU), 2030 European Energy [COM(2014)16Final] and Energy Roadmap 2050 [COM(2011) 885 final], strongly requires more focus on the energy efficiency on housing sector. The Directive 2014/24/EU on public procurement, requires that all member states introduce electronic means to exchange information and communication in procurement procedures. The integrated approach of the *Net-UBIEP project*, based on BIM, integrated with energy performance requirements, will be key to solve all the problems in a more effective and efficient manner. The project proposes BIM Qualification Models integrated with energy competences, to widespread a better comprehension of energy issues along all the value chain of building industry so that both existing and new building will have better energy performances. Article presents the process of identification of specific energy BIM competences for each target group needed to implement BIM models during the whole building life cycle. Data for analysis was gathered by use of direct and indirect observation and experiences of construction sector experts. During the project the "integrated" BIM Qualification Models will be validated by stakeholders and proposed for standardization to find a broader acceptance at European and international level through regulatory organizations (CEN/ISO).

Health Care Modelling (ORAHs) I

Stream: OR for Health and Care I

Chair: *Sally Brailsford*

1 - Patient flow model for the EMS in the Netherlands

Geert-Jan Kommer

The provision of emergency medical services (EMS) is an important health care activity and should be available and accessible at all times. Recent trends in the Netherlands show bottlenecks in health care provision are increasing and result in decreasing performance of health care suppliers. Longer waiting times and blocking at emergency departments (ED's), increasing ambulance response times and, in the Netherlands, long waiting times for out-of-office GP-services are typical. The bottlenecks have a regional character. In urban areas, demand for EMS per capita is higher than in rural areas, despite the high number of elderly in many rural areas. Organizational aspects also play a role in performance. EMS-providers show differences in patient flows, in terms of input, throughput and output of the (sub-)system. In our study, we developed a SD patient flow model for the EMS in the Netherlands. We used patient data of health care use over the years 2012-2015 to describe patient flows in the acute care network in time and construct a baseline scenario that shows future developments based on demographic developments and recent trends in EMS. This baseline simulation shows expected development of the current bottlenecks. Alternative scenarios in which we search for a more balanced supply of EMS are examined. The results provide policy makers insight in possible future developments and alternatives to manage the increasing bottlenecks in EMS.

14TH INTERNATIONAL SCIENTIFIC CONFERENCE
Novi Sad, November 21-23, 2018

1st Announcement

Important dates

- abstract submission **August 20, 2018**
- notification of abstract acceptance **September 10, 2018**
- final manuscript submission **October 20, 2018**
- scientific conference **November 21-23, 2018**

Instructions

Abstracts and final manuscripts have to be prepared in informatics' form, as MSWord files. Templates for abstract and final manuscript submission will be available for downloading on the iNDiS 2018 web site.

Abstracts, with max 300 words, should be submitted to Organizing committee until the 20th August. Abstracts have to contain the title of the paper, full names of all authors, their positions and titles, contact addresses, e-mails, phone and fax numbers.

The length of final paper is up to 8 pages including figures, tables, references and appendices. Detailed writing instructions will be sent to the authors enclosed with notification of abstract acceptance and will be available on Conference website.

The Proceedings of iNDiS 2018 will be published. International scientific committee will review all papers. For text originality, quality and accuracy of data and results responsibility lies solely on authors. It is implied that paper has not been previously published.

Programme

| November 21 st , Novi Sad | November 22 nd , Novi Sad |
|--------------------------------------|---|
| 09:00 Registration | 09:00 - 13:00 Presentations |
| 10:00 Opening ceremony | 16:00 - 19:00 Presentations |
| 10:30 Introductory presentations | 20:00 Formal dinner |
| 12:00 Cocktail | November 23rd, Novi Sad |
| 16:00 - 19:00 Presentations | 09:00 - 13:00 Presentations |
| | 13:00 Closing ceremony |
| | <i>Social programme (excursion)</i> |

Language

The official languages of the scientific conference are Serbian and English. Papers should be written in english language.

Call for papers

Department of Civil Engineering and Geodesy, Faculty of Technical Sciences in Novi Sad, invites you to take part in conference

iNDiS 2018

planning, design, construction and building renewal

that is going to be held on November 21-23, 2018.

iNDiS 2018 is 14th International Conference on planning, design, construction and building renewal that has been organizing in Novi Sad since 1976.

The aim of the Conference is to assemble an international forum of experts from the country and abroad on theoretical and experimental research in design process, building maintenance and project and construction management.

At the same time, this will be a place to exchange experiences and information about latest achievements in planning, design, new materials and technologies for construction, restoration and renewal of buildings.

Organizing committee

- Vlastimir Radonjanin, chairman
- Radomir Folić
- Dorde Ladinović
- Milan Trivunić
- Mirjana Malešev
- Srdan Kolaković
- Milinko Vasić
- Darko Reba
- Jelena Atanacković-Jeličić
- Milena Krkješ

Topics

- Experimental and theoretical analysis of structures.
- Contemporary construction materials.
- Assessment, renewal and maintenance of buildings.
- Design and construction of bridges and roads.
- Design and construction of hydrotechnical structures.
- Aseismic design of structures.
- Geotechnical problems.
- Management in design methods and construction.
- Architectural and urban planning and design.
- Sustainable development and energy efficiency in construction.
- Disaster Risk Management and Fire Safety.
- European standards in the design and construction of structures.

Date and place

The Conference will be held in Novi Sad, the second largest city in Serbia, in November 21-23, 2018. More precise information about meeting location will be given in the next announcement.

Registration fee

The registration fee for the conference is 12,000.00 RSD (tax included) or 100 € for participants from abroad.

NEW LEARNING METHODOLOGIES ON SUSTAINABLE CONSTRUCTION

Abstract: Today's education programs do not sufficiently include topics of energy efficiency and sustainable construction. These deficiencies were recognized by the Faculty of Civil Engineering in Zagreb and the Croatian Engineering Association, and within the framework of several EU projects they developed a training system on energy efficiency and sustainable construction. The paper will showcase projects CROSKILLS, FIT-to-nZEB, Net-UBIEP, which are oriented towards educating construction workers, architects, designers, contractors and supervisors in the area of energy efficiency and BIM technology. The CPD4GB project will also be presented. The mission of the project is to encourage the development of sustainable partnerships of higher education institutions, professional associations and volunteers in the development and implementation of the socially useful learning for sustainable/green construction. The overall goal of the project is developed of methodology and simultaneous application through which students acquire practical knowledge and skills and use that to solve local community projects, with mentoring, which enables them to gain competences. It is a pilot project that should be the basis for new approaches to interdisciplinary formal and non-formal learning.

Key words: education, energy efficiency in buildings, sustainable construction, volunteers

NOVE METODE EDUKACIJA ZA ODRŽIVU GRADNJU

Rezime: Današnji programi obrazovanja ne uključuju u dovoljnoj mjeri teme energetske učinkovitosti i održive gradnje. Na Građevinskom fakultetu u Zagrebu (GF) i u Hrvatskom inženjerskom savezu (HIS) prepoznali su te nedostatke, te su u okviru nekoliko EU projekata razvili sustav obrazovanja na temu energetske učinkovitost i održive gradnje. U članku će biti prikazani projekti CROSKILLS, FIT-to-nZEB, Net-UBIEP koji su orijentirani na edukaciju radnika, projekatnata, izvođača i nadzornih inženjera u području energetske učinkovitosti i BIM tehnologije. Također je prikazan projekt CPD4GB. Namjera projekta je poticanje razvoja održivog partnerstva visokoobrazovnih ustanova, profesionalnih udruga i volontera u razvoju i provedbi društveno korisnog učenja za održivu/zelenu gradnju. Cjelokupni cilj projekta je razvijanje metodologije i istodobna primjena kroz koju studenti stječu praktična znanja i vještina koja koriste za rješavanje projekata lokalne zajednice. uz mentorstvo, što im omogućava stjecanje kompetencija. To je pilot projekt koji bi trebao biti temelj za nove pristupe interdisciplinarnom formalnom i neformalnom učenju.

Ključne reči: obrazovanje, energetska učinkovitost u zgradarstvu, održiva gradnja, volonteri

7. Building SMART International summit – Dusseldorf March 2019

7.1 Description of the event

The buildingSMART International Standards Summit took place in Düsseldorf, Germany 25-29th March 2019. The summit brings together all the international stakeholder of the building industry, to develop standards for any building domain.

The Professional Certification Program is one of the activities of the summit and is created to support training organization to deliver internationally standardized and recognized training content. buildingSMART is not delivering training itself, but defines learning outcomes and manages the approval of training providers and the testing and qualification of individuals.

The Program goals are:

- To standardize and promote openBIM training content
- To support and accredit training organizations
- To test and certify individuals

7.2 Achievements

During the summit a meeting with the person in charge of the qualification program, Mark Baldwin, allow to define the procedure to use the buildingSMART platform to introduce the learning outcomes produced for the use of BIM to improve energy performance of the buildings. Guidelines and a draft of MoU was produced and distributed also to the other three projects coordinators: BIMCERT, BIMIMPLEMENT, BIMEET.

During the meeting we agreed that the “BIM alliance” of the European project would produce, for the Energy Analysis module, the following:

- 25-30 Learning Outcomes
- Question Database with at least 200 questions and answers
- Body of Knowledge

In the following the presentation of the qualification program presented by the coordinator Mark Baldwin.

Market Need

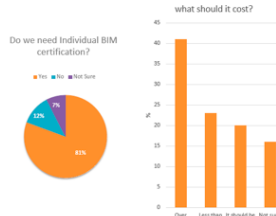

81% - 'BIM competence certification is necessary'.

79% - 'based on openBIM principles' (12% said it not openBIM)

68% - 'buildingSMART should be involved' (16% felt buildingSMART should not be involved)

64% of respondents felt that certification should involve a fee

- 41% more than US\$ 100
- 23% less than US\$ 50.
- 20% believed certification should be free

Professional Certification

Scope

Professional Certification

20

Phase 1: Individual Qualification

3 components:

1. Learning Outcome Frameworks (LOF's) - which describe the content of each of the eight modules
2. Course approval – the procedure to review and approve candidate trainings.
3. Individual qualification – the testing and qualification of individuals who have undertaken an approved training.

Professional Certification

LOF Overview

BASIC - Learning Outcome Framework Overview

Below is a preview of the LOF for the Basic module. Please note that not all complete LOF, but rather a listing of the areas to be covered, for preliminary chapter review and comment.

To be Comfortable with what BIM is, why it is needed, and its specific Terminology. Delegates on completion should be able to:

- Define BIM
- Identify & Define key BIM terminology
- Define BIM maturity levels, and
- Define what constitutes an Information Model.

To appreciate the advantages that BIM can bring compared to a traditional project, the historical issues within the industry and its role BIM has in satisfying government targets. Delegates on completion should be able to:

- Know why collaborative and new ways of working are required.
- Identify the effects of poor information management on projects.
- Identify the standards developed to mitigate poor information.
- Identify the benefits of BIM to construction professionals and
- Identify the benefits of BIM addition to clients, and facility management.

Professional Certification

Example LOF (bS Norway)

| No. | Learning target |
|----------|---|
| 01-01-01 | Know the effect of up to three projects that use openBIM and which demonstrate: <ul style="list-style-type: none"> - increased multidisciplinary collaboration - economic benefits - improved quality |
| 01-01-02 | Know the benefits of openBIM for clients: <ul style="list-style-type: none"> - More streamlined process - Increased consistency between order and result (quality) - Improved time and financial management - Improved profitability |
| 01-01-03 | Know the benefits of openBIM for consultants: <ul style="list-style-type: none"> - Improved quality of collaboration - Increased consistency in multidisciplinary coordinated production documentation - Competitive advantage because openBIM experience is requested for more and more projects |
| 01-01-04 | Know the benefits of openBIM for contractors: <ul style="list-style-type: none"> - Competitive advantage by being able to submit quotes and tenders with less uncertainty with regard to cost and time - Better management of time and finances - Improved profitability |
| 01-01-05 | Know the benefits of openBIM for management and operations: <ul style="list-style-type: none"> - Improved functionality in the building - Lower operating expenses The following point assumes FM & Operation documentation is available from openBIM: <ul style="list-style-type: none"> - Improved access to and maintenance of FM & Operation documentation |

POSSIBILITIES OF USING BIM FOR DEEP ENERGY RENOVATION ANALYSES

Sanjin Gumbarević (1), Bojan Milovanović (1), Marina Bagarić (1) and Mergim Gaši (1)

(1) Faculty of Civil Engineering, University of Zagreb, Croatia

Abstract

With unsustainable greenhouse gas emission and irrational energy consumption, building sector have big impact on environment pollution and climate change. In order to reduce the building sector impact, the majority of current buildings need to be renovated and new buildings built as Nearly Zero-Energy Buildings (NZE). Since for building renovation and new NZEB, together with integrated design, management of relevant information is crucial, the use of Building Information Modelling (BIM) becomes evident. BIM is a concept which promotes integrated design process in a way that connects all key stakeholders by collaborating on the same information model. In order to assess energy demands of renovated building and therefore perform an optimization process, BIM must be transformed in Building Energy Model (BEM). Today, BIM-to-BEM Information Process (BBIP) is still not fully developed which results with some information being lost during BBIP. Those lost information must be re-entered to create correct BEM. This paper proposes a procedure for tackling this BBIP information loss. This procedure is summarized in the workflow steps needed to acquire correct information about the building as an input for optimization of envelope design in deep energy renovations and exploitation of the building during its lifecycle by using BIM tools and processes. Moreover, to increase the use of BIM for energy efficiency purposes, competences of all building stakeholders must be enhanced.

Keywords: BIM, Deep Energy Renovation, Building Performance Simulation, Envelope Design, Net-UBIEP, BIMzeED

1. INTRODUCTION

Contribution of building sector in the energy consumption and greenhouse gases emission is unsustainably large. Energy consumption in the building sector mostly manifests through energy demands for heating and cooling, so the influence of the building envelope cannot be underestimated [1]. Therefore, European Union made political decision (with Directive 2010/31/EU) to increase the number of Nearly Zero-Energy Buildings (NZE), but society in general should also recognize the impact of each and every individual as well. As large portion

9. BIMalliance conference - Barcelona 16 may 2019

9.1 Description of the event

The Building Barcelona Construmat is home to an array of products and services such as construction machineries, construction equipment and accessories, construction technologies, products and materials and all construction related goods and services. The event is known to offer great networking and contacts with industry people. The event also presented the latest news and development that is taking place within the industry. A corner was reserved to Building Information Modelling.

25

A screenshot of the website for 'Barcelona Building Construmat' held from May 14-17, 2019, at Fira Barcelona. The page features a navigation menu with 'Industry' highlighted. The main content area is titled 'The BIM Spot by ITeC' and describes a networking event for BIM product and service companies. A photograph shows two men sitting on chairs at a table, engaged in conversation at the event. The background of the photo shows a banner for 'The BIM Spot'.

[Link to the event in Barcelona](#)

The event was considered a good opportunity to meet among different European projects dealing with the use of BIM to improving energy performance during the life cycle of a building. The following was the agenda co-organized with EASME.

9.2 Agenda

1. Introduction BIMalliance

Introducing the 4 BIM projects and the collaboration. Detailing BIM as a skills enabler

2. Plan – BIMmplement |

Energy savings targeted? Energy savings targeted during the design phase. Utilising BIM tools to proactively reduce the gap between predicted and actual building performance. Utilising BIM as an enabler of effective collaboration between design disciplines Reducing performance disparity from conception - **Potential Energy**

3. Design – BIMEET

Energy savings designed into the build -BIM utilised to achieve energy optimization in operation phase. BIM as a tool to support the visualisation of a building's energy performance; Design- operation transition – identifying the obstacles **Embedded Energy**

4. Build – BIMcert

Energy savings achieved through the building operation stage – monitored and managed continually with lessons learned fed back to design teams for future projects. The practicality of implementing BIM assists performance management through effective data management in building operations by support interlinking of data environments (BIM supported Energy Management System of Buildings). Effective energy management reducing energy consumed whilst maintaining occupants' health, safety and comfort conditions. BIM utilised to improve existing processes aimed towards sustainable usage of energy – **Operational Energy**

5. Operate – net-UBIEP

Energy savings through the lifetime of the building- energy performance during the life cycle of a building BIM as a tool to support energy management of a building's performance; Overcoming the barriers to using BIM with in-use building performance management. **Sustainable Energy**

Discussion in subgroups:

1. certification and accreditation of BIM related skills,
2. BIM for blue-collar workers,
3. how to use BIM models as training tools,
4. how to use BIM to upskill building professionals towards higher level of energy efficiency etc.
5. Reducing the carbon footprint of construction utilising BIM

9.3 Presentation by ENEA

Net-UBIEP was presented through the following slides:

Network for using BIM to Improve Energy Performance

Anna Moreno
Project coordinator

NET UBIEP

This presentation reflects only the author's view. The Agency is not responsible for any use that may be made of the information it contains.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No.754016.

Net-UBIEP objective is to disseminate the «use of BIM» to improve energy efficiency by involving:

- Public administration
- Engineers and Architects
- Technicians, Installers, Maintainers
- Owners, Tenants, Building administrators

This presentation reflects only the author's view. The Agency is not responsible for any use that may be made of the information it contains.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No.754016.

Who should know what during the building life

| Life cycle | Preparation Brief and concept design | Developed and technical design | Construction | Handover and close out | In use and refurbishment |
|---|---|--|---|--|--|
| Responsible for the authorization process | Digitize existing information in digital format | Reduce Common Data Environment for the authorization process | to provide and receive information related | Accept all the information for the authorization process | Desired state - Complete set of information in digital format - All the authorization process is smooth and fast |
| Designers | Share the responsibility for the building information | Use calculation to reduce the heat reduction from technical and regulatory point of view | Ensure that all the data that provide the BIM model is correct | Full all documentation and regulatory rules | Desired state - All the information for the authorization process is available in any time - All the authorization process speeds up |
| Constructors | Share the responsibility for the building information | Use calculation to reduce the heat reduction from technical and regulatory point of view | Use BIM model to reduce the impact of the building on the environment and improve the quality of work | Full all documentation and regulatory rules | Desired state - Have any calculation accessible through BIM - Improve the communication with the designers for reducing the error |
| Technicians | Share the responsibility for the building information | Use calculation to reduce the heat reduction from technical and regulatory point of view | Use BIM model to reduce the impact of the building on the environment and improve the quality of work | Full all documentation and regulatory rules | Desired state - Have any calculation for maintenance and detection accessible through a tablet |
| Owners both private & public | Share the responsibility for the building information | Use calculation to reduce the heat reduction from technical and regulatory point of view | Use BIM model to reduce the impact of the building on the environment and improve the quality of work | Full all documentation and regulatory rules | Desired state - BIM tooling - Easy management - Low cost management |

This presentation reflects only the author's view. The Agency is not responsible for any use that may be made of the information it contains.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No.754016.

9.4 Photos

A photo of the panel publicizing the event was taken and here attached.

Poster of the Net UBIEP project prepared by Slovakia

After the event, during an informal meeting of the four project leader, it was decided to carry on common dissemination and exploitation strategies and a first draft of the future common activities was drafted. These the points that were agreed:

- Identify the same qualification framework for all the four projects based on learning outcomes
- Propose the learning outcome framework (LOF) to buildingSMART international in order to include the LOF in their qualification platform.
- Find other funding opportunities within the following H2020 calls.

COMPETENCES OF ENGINEERS AND WORKERS IN THE ARCHITECTURE, ENGINEERING & CONSTRUCTION INDUSTRY FOR DELIVERING NEARLY ZERO-ENERGY BUILDINGS

Stručni rad / Professional paper

Summary

By 31 December 2020, all new buildings in the European Union, and therefore in Croatia, should be Nearly Zero-Energy Buildings (NZEB). A question which arises is: are the engineers and workers in the Architecture, Engineering & Construction (AEC) industry well prepared for delivering such a solution? Information loss and lack of collaboration bring potential problems in the construction phase, so quality of final product (NZEB) drops drastically. Building Information Modeling (BIM) is a good solution for the problems described, since it reduces information loss in the building life cycle (design, construction, operation & maintenance, demolition) and increases collaboration between stakeholders, as they need to work with the same information model. The building should also be a good representative of the design itself, so it should be built as correctly as possible. The article shows in what way the Horizon 2020 Fit-to-NZEB and Net-UBIEP projects can be used to solve lack of competences for building NZEB and problems of BIM implementation in the AEC industry in Croatia. The Net-UBIEP project aims to develop schemes for BIM usage in increasing building energy performance (validation through surveys), while project Fit-to-NZEB aims to develop competences for deep energy retrofit through education at EQF levels 3-7.

Keywords: *competences, Nearly Zero-Energy Buildings, Fit-to-NZEB, BIM, Net-UBIEP*

[Publisher's note: The body of the work, below, has not been revised or proofread by the Croatian Society for Quality (HDK)]

1. INTRODUCTION

Improving the energy efficiency of European building stock is a key step in achieving 2020, 2030 and 2050 EU energy and CO₂ emission targets. European Directives, in particular, the EED [1], EPBD [2] as well as amended EPBD and EED [3] and related national regulations, set very strict energy-efficiency targets on European building stock, with the aim to generalize nZEB by 2021. Panev et al. [4] see energy renovation as a stabiliser for the building sector and consequently the overall EU economy while technological aspects whose improvement is necessary and innovations needed to push forward the market uptake of Nearly Zero-Energy Buildings (nZEB) will foster economic growth. The construction industry presents a major opportunity to not only reduce energy demand but also to improve process efficiency and reduce carbon emissions. Original culture and practices of the construction sector are widely perceived as a “low-tech” area with a significant proportion of “blue collar” workers but the construction industry is experiencing its digital revolution, with an intensification of digital

Abstract. The article presents the results of the survey aimed to analyze the attitude and perceptions regarding the use of BIM for data handling and analysis. Two target groups were researched, according to the role they play in building processes, namely public administrations (including tenants, owners, and building administrators) and Professionals (engineers / architects). The study conducted during the Net-UBIEP (Network for Using BIM to Increase the Energy Performance) project. The purpose of this study was to assess the implementation of building information modeling (BIM) as a tool and a process among key stakeholders in order to understand the current use of BIM, benefits of using BIM, obstacles of using BIM as well as possible future use. This study can be used as a pre-analysis of feedback from building users and construction professionals and can contribute to the co-adaptation process between BIM knowledge providers and BIM users.

Keywords: building information modelling, construction projects, collaboration.

Introduction

Building information modeling (BIM) refers to a set of technologies and organizational solutions that are expected to increase inter-disciplinary collaboration in the construction industry and to improve the productivity and quality of the design, construction, and maintenance of buildings (Miettinen & Paavola, 2014). Although some criticism regarding the promises of building information modeling exists, BIM tools continue to proliferate within the construction industry and becoming more sophisticated. Therefore, the construction industry needs professionals who are not only skilled in their domain but are also good team members, communicators and lifelong learners (Dym, Agogino, Eris, Frey, & Leifer, 2006). The identification of the competencies that need to be taught to ensure the collaborative workflows and integrated project deliverables is becoming increasingly important (Succar & Sher, 2014).

Technology alone does not ensure that collaboration, communication and conflict management are efficient. Soft skills are essential in construction, as in many other industries. Negotiation, teamwork, and leadership are needed in the BIM project team. Davies, McMeel, and Wilkinson (2015) have revealed that a better definition of the expectations and activities of professionals and teams in a BIM project can help better understand the importance of soft skills in BIM-based collaboration. They form an important part of BIM roles applicable to projects implemented in the BIM environment.

The methodology of the research includes "focus groups" to provide insights into how experts think and provide a deeper understanding of the BIM competencies and BIM-related learning outcomes. Based on the results obtained in the "focus groups" the initial material for further analysis was gathered. Later was used to prepare the questionnaires for the survey of targeted groups: professionals (engineers/architects) and public administrations (including tenants, owners and building administrators). The paper presents the summarized results of this survey. Although the survey is a valuable research tool, it normally asks closed-ended questions that limit the feedback that can be gained from a respondent. Therefore, the interviews with some representatives of targeted groups were conducted to gain more in-depth information to supplement surveys.

At the first stage in a number of discussions, the experts selected the specific sets of social, personal and managerial skills as well as professional competencies and learning outcomes related to BIM application in construction projects. Those sets were included in the survey and distributed to the representatives of target groups. The article

12.2 Paper

Improving Competences of Engineers and Workers in the AEC Industry for Delivering NZEBs

Sanjin Gumbarević¹; Bojan Milovanović¹; Marina Bagarić¹; Mergim Gaši¹; Ivana Burcar Dunović¹

¹Faculty of Civil Engineering, University of Zagreb, Croatia

Abstract:

The Energy Performance of Buildings Directive requires from the European Union Member States to ensure that by 31st of December 2020 all new buildings are Nearly Zero-Energy Buildings (NZEB) and after 31st of December 2018, new buildings occupied and owned by the public authorities should also have the NZEB performance. The large-scale deployment of NZEBs represents a challenge for all the stakeholders involved in the construction sector, where the lack of adequate competences is identified as one of the main obstacles. This paper analyses the current situation in the construction industry in Croatia and provides a possible solution for the abovementioned problem. Fit-to-NZEB and Net-UBIEP (Horizon 2020 projects) are dealing with the lack of education and competences in Architecture, Engineering and Construction (AEC) industry for delivering NZEBs. Fit-to-NZEB aims to increase knowledge of AEC engineers and workers in deep energy retrofit through the education in EQF levels 3-7, while Net-UBIEP seeks to develop the schemes for using Building Information Modelling (BIM) throughout the whole building lifecycle to increase building's energy performance. The integrated design process and strengthen control on the construction site, supported by BIM, should be carried out as they are the most critical parts in delivering NZEBs. Therefore, Fit-to-NZEB and Net-UBIEP projects can contribute to upgrading professional competences of all the stakeholders involved in the design and realisation of NZEBs.

Keywords: education in construction; nearly zero-energy buildings; net-UBIEP; fit-to-NZEB; BIMzeED; building information modelling;

1. Introduction

To achieve 2020, 2030 and 2050 goals set by the European Union through the Energy Performance of Buildings Directive (EPBD) and Energy Efficiency Directive (EED), a large scale of Deep Energy Retrofit (DER) should be carried out. EPBD prescribes that by 31st of December 2020 all new buildings and all the buildings under major renovation should perform as NZEBs. The same applies to the buildings occupied and owned by the public authorities after 31st of December 2018, because buildings owned and occupied by the public authorities should be a good-practice example as they are representing the state and therefore should adopt energy efficiency demands first to encourage others to follow their example. The EED also set strict energy-efficiency targets on European building stock with demand for every EU Member to develop a program for deep energy renovation of the building stock up to 2050. As a result of the deadlines mentioned above, it can be concluded that the large number of NZEBs will be built from now, up to 2050. A question which arises is, are the engineers and workers in the

13. EU Sustainable Energy Week - Bruxelles 18-20 june 2019

13.1 Description event

EU Sustainable Energy Week (EUSEW), the annual flagship event organised by the European Commission, brings together public authorities, private companies, NGOs and consumers to promote initiatives to save energy and move towards renewables for clean, secure and efficient power. In 2019, activities are focused around the theme 'Shaping Europe's Energy Future'. Now in its 14th year, EUSEW is bigger and livelier than ever with over 90 policy sessions, more than 4,000 registered participants, 380 speakers and 100+ unique networking opportunities.

A screenshot of the Sustainable Energy Week website. The header includes the logo, navigation links (About, FAQ, Contact, MY REGISTRATION, LOGIN FOR ORGANISERS), and a menu (CONFERENCE, NETWORKING, AWARDS, ENERGY DAYS, PARTNERS, RESOURCES, NEWS). The main content area has a call to action 'JOIN US #EUSEW19 #ENERGYDAYS' with buttons for 'REPLAY SESSIONS 2019' and 'PHOTOS'. To the right, under 'TODAY @ EUSEW 2019', there are links for 'DAY 1 EUSEW 2019', 'DAY 2 EUSEW 2019', and 'DAY 3 EUSEW 2019'.

13.2 Presentation by BIM Alliance

BIM alliance prepared a proposal for a workshop during the sustainable energy week event and was accepted. The speakers were from both BIMCERT and Net-UBIEP. The workshop saw the participation of around 80 people with many Q&A.

The slides presented are the following:

BIMalliance focus

Energy targets, energy savings – BIM in European decarbonisation strategy and Energy Roadmap 2050
Dissemination and communication - European wide and broader
Accreditation and certification
Exploitation – Target groups inclusion via professional associations, focus on SMEs; mission to assist countries with low BIM maturity level in further progress and uptake
Future Collaborative opportunities – Research, innovation, development of new high skilled jobs and professions related to BIM and energy efficiency,
A BIM skills passport for workers – pan European unified scheme of competences and qualifications, providing market recognitions of skills, transferability, employability and competitiveness
Assistance to countries with low BIM maturity level
More effective impacts of the projects related to construction skills and sustainable energy - How to measure them and provide to be long-term prospective

A presentation slide with a light blue background and abstract wave patterns. It features logos for Sustainable Energy Week and BIM Alliance at the top left. The main title is 'Role of BIM in Energy Roadmap 2050', followed by a bulleted list of key points and two numbered aspects.

Role of BIM in Energy Roadmap 2050

- **The EU Energy Roadmap 2050 puts rigorous demands and ambitious targets for the building sector; the EC's statements:**
 - Decarbonisation is feasible and affordable;
 - Energy savings throughout the system are crucial and responsibility for all;
 - Mobilising investments in effective retrofitting incentives;
 - Engaging and uniting wide community of professionals, policy makers, citizens, in common actions.
- **BIM is the most effective supportive technology for: sustainable energy, reducing carbon footprint and increase of energy efficiency in building sector.**
- **BIM enables application of system thinking approach in two aspects:**
 1. **Inclusion of all stakeholders (designers, construction contractors, facility managers, policy makers) in united actions to achieve and maintain energy efficiency of buildings throughout their life cycle;**
 2. **Optimization of overall energy efficiency of a building, in terms of: a) a building life cycle, b) all parts of design, c) all factors that influence energy efficiency, with particular focus on maintenance.**

17-21 JUNE 2019
SHAPING EUROPE'S ENERGY FUTURE

What can we do now?

- There is a need to unite construction techniques, policy formulation and policy implementation into a balanced and coherent system towards sustainability of the building sector.
- A unified program for qualifications for sustainable energy construction skills needs to be developed in order to enhance wider market recognition, more intensive demand and more stimulating support provided by policy and regulatory framework, for construction sector workforce skilled and qualified to execute works connected to achievement of sustainable energy performance of buildings.

A presentation slide with a light blue background and abstract green and blue wave patterns. It features logos for Sustainable Energy Week and BIM Alliance in the top left. The main title is 'What needs to be done in the future?' in blue. Below it is a bulleted list of three points in green text. At the bottom right, it says '17-21 JUNE 2019 SHAPING EUROPE'S ENERGY FUTURE #EUSEW19'.

What needs to be done in the future?

- BIM is a modern digital technology that supports sustainability trends in construction sector, particularly the increasing requirements for energy efficiency competences and applicable skills.
- Therefore, solving the problem of development of skills for sustainable energy in the building sector, and stimulating demand for sustainable construction and energy skilled workforce, is closely connected to upgrading of BIM skills of construction professionals.
- All aspects should be included in putting digital construction and EE skills in EU policy makers' agenda: Rethinking building markets, Regulatory framework arrangement, Driving changes at international level.

D40 – D6.7 International Net-UBIEP events

15. Events Exploitation

In the preparation of this second event a document was produced with the contribution of the coordinators of the 4 projects.

The following document is the output of the BIM Alliance constituted by the four projects:

15.1 BIM EASME Projects

The Alliance of BIMcert, BIMplement, Net-UBIEP and BIMEET

BIMalliance

*Minimising the carbon footprint of energy use in construction –
When the whole is greater than the sum of its parts!*

15.2 Focus of Collaboration work

15.2.1 Focus of work

1. Energy targets, energy savings – Energy week presentation
2. Dissemination and communication
3. Accreditation and certification - utilise databases
4. Exploitation
5. Future Collaborative opportunities

1. Energy targets, energy savings : To determine position of BIM in European Energy and Climate Roadmaps beyond 2020; to explore fields of coordination and support actions, research and innovation, as well as potential funding sources for the activities,

2. Dissemination and communication: - Establishing a common communication and collaboration platform of the 4 projects (e.g., linking their web pages; sharing information about the Alliance common work, organization of joint events, etc.), in order to provide better informing and multiple use of individual projects' stakeholders and followers.

3. Accreditation and certification - To initiate a common pan-European recognized certification scheme of BIM and EE skills in AEC industry (buildingSMART option to be considered)

4. Exploitation of results - to prepare and distribute a survey via the common platform / united web pages / for assessment of the progress on BIM maturity and acceptance, as a result of the activities of the 4 projects; to develop a common report with guidelines for future actions.

5. Future Collaborative opportunities

- Developing additional modules for skills delivery.
- Developing BIM expertise in countries where deployment is low – working with public authorities to develop national BIM development plans
- Developing an EU BIM Centre of Excellence – virtual centre?

15.2.2 Future collaborative opportunities

Opportunity and need to develop competencies to existing profiles, in public administration in particular; for instance, Energy Auditors and Construction Inspectors, should be upskilled in using BIM models to issue construction and commissioning permissions for buildings.

1. Energy targets, energy savings : To determine position of BIM in European Energy and Climate Roadmaps beyond 2020; to explore fields of coordination and support actions, research and innovation, as well as potential funding sources for the activities,
2. Dissemination and communication: - Establishing a common communication and collaboration platform of the 4 projects (e.g., linking their web pages; sharing information about the Alliance common work, organization of joint events, etc.), in order to provide better informing and multiple use of individual projects' stakeholders and followers.
3. Accreditation and certification - To initiate a common pan-European recognized certification scheme of BIM and EE skills in AEC industry
4. Exploitation of results - to prepare and distribute a survey via the common platform / united web pages / for assessment of the progress on BIM maturity and acceptance, as a result of the activities of the 4 projects; to develop a common report with guidelines for future actions.

15.3 Project Summaries

15.3.1 BIMcert

Development of BIM training and qualification scheme for all levels of the construction sector, specifically "blue collar." BIMcert is a European wide project, funded by Horizon 2020, aimed at providing a training and qualification scheme for the skills required to support the implementation of BIM across the construction supply chain.

The Construction Industry, including its supply chain, is a significant contributor to the European economy. However, the Built environment is recognised as one of the largest consumers of natural resources, producers of carbon emissions and source of energy wastage. To improve the sustainability of the Built Environment and energy efficiency, a more coordinated approach to enhance collaboration is required across the industry. Building Information Modelling (BIM) provides a collaborative design, build and manage processes that offers the opportunity for improved efficiencies for the Construction Industry in energy, materials and time. BIM can reduce waste, inefficiencies in the supply chain, improve coordination and management, while incorporating better, more suitable and more sustainable design choices and decision making.

This project will:

- Enable collaborative working to improve design, development and delivery of both new build and renovation construction projections, whilst supporting energy efficient near zero buildings (embedded energy)
- Achieve efficient and effective ongoing management of the building in terms of energy and fabric (operational energy).

- Utilise Building Information Modelling (BIM), and virtual construction as the enabling methodology and tool to achieve sustainable energy efficient construction

BIMCert approach

BIMcert is a project based upon 3 steps, aimed at providing a large scale training & qualification scheme providing the requisite skills for the entire construction supply chain to:

1. **Enable** collaborative working to improve access to and the transition from design to development and delivery of both new build and renovation to achieve energy efficient near zero buildings (**embedded energy**)
2. **Achieve** efficient and effective ongoing management of the building in terms of energy and fabric (**operational energy**)
3. **Utilise** Building Information Modelling (virtual construction) as the enabling methodology and tool (**sustainable energy**)

Opportunities for collaboration

The deliverables BIMcert is ready to share are:

- Pilot testing materials, learning units:
- Reports on surveyed industry needs (WP2 Reports Stage 1,2, and 3)
- BIMcert Strategy Compass

15.3.2 BIMplement

BIMplement offers the trainers and the learners a range of tools that fit the objective of developing a fully qualified and equipped workforce, capable to implement, execute and perform all the necessary labour actions. Main aim is to achieve an improved quality for NZEB construction and renovation by setting up a large scale, training, CPD and qualification schemes, addressing the entire process phases in a cross-crafts and cross level multidisciplinary approach, strengthened with hands-on and BIM-enhanced workplace learning tools by following objectives:

1. To improve the overall quality of renovations and new constructions, based on a BIM-enabled workplace learning, addressing the entire process phases in a cross-crafts multidisciplinary approach
2. To create a new generation of professionals and craftsmen, equipped and enabled by BIM skills, to enhance the overall quality of construction and renovation across the entire process
3. To foster interactions between different trades and professions enabled by a flexible qualification, certification and accreditation methodology for implementing BIM as a workplace learning environment
4. To sustain the qualification and training schemes a replication and exploitation strategy will be developed and validated

Opportunities for collaboration

The deliverables BIMplement is ready to share are:

- D2.1: Methodology for a BIM enhanced Qualification Framework FINAL
- D2.2: Five national results of usability testing
- D2.3: Adjusted methodology for a BIM-enhanced Qualification Framework and instruction guide
- D3.4: Selected tool and learning methods implemented in the five national frameworks

- D3.5: Overview of possibilities to connect tools and learning methods to the BIM
- D4.1: List of criteria of the selected territories
- D4.2: Training content and list of tools for BIMplement coach
- D4.3: Methodology guide and tools for awareness campaign
- D4.5: Tools and learning methods and qualification schemes for BIM work place trainers
- D6.1: Dissemination and Communication Plan
- D6.2: BIMplement corporate identity
- D6.3: Production and maintenance of website and subsites
- D6.4: Brochure

15.3.3 Net-UBIEP

Net-UBIEP aims at increasing energy performance of buildings by wide spreading and strengthening the use of BIM, during the life cycle of the building. The use of BIM from the design phase through the construction, management, maintenance, demolish is investigated to identify the competences needed, in each phase, in order to decrease the environmental impact of the building during its life cycle.

To achieve this objective it is important that all the professionals and technicians who work in the building supply chain are aware of their role into collecting, managing and storing all the information required during construction, management, maintenance and decommissioning of a building.

Each technician, public officer, designer, constructor, facility manager, supplier, etc, will have to understand which information they manage could be used by any other individual during the life time of a building that goes far behind the duration of the computer who has generated the information. Therefore it is important that all the different targets use the same language, the same dictionary and the same data structure. Net-UBIEP promote the use of “openBIM”.

BIM Qualification Models proposed by the net-UBIEP partners tackle the problem of energy competences gap in the existing buildings sector as a whole.

The information materials produced for the four targets may be used for developing the module for the training necessary to have a qualification. At the same time the learning outcome, may be used as base for the qualification schema to be agreed among all the partners

Net-UBIEP Project aims at increasing energy performance of buildings by wide spreading and strengthening the use of BIM, during the life cycle of the building. The use of BIM will allow simulation of building energy performance using different materials and components, both to be used in the building design and/or in building design refurbishment.

To reach this aim Net-UBIEP Project has:

1. Identify professional profiles involved in NZEB building sector with specific BIM related competences . Four target groups have been selected according to the role they play in building processes, namely Public Administrations, Professionals (Engineers / Architects), Technicians (Installers / Maintainers), Tenants/Owners/Building Administrator.
2. Elaborated a three dimensional matrix for the identification of competences required to each of above target group while working in buildings applying BIM to ensure the highest energy performance. The matrix indicates competences needed in each construction phase: strategic definition, preparation and brief, concept design, development design, technical design, handover and close out, in use refurbishment and eventual demolish.
3. Develop BIM Qualification Models composed by a BIM Training Scheme and a BIM Qualification and Certification Scheme
4. Standardize at European level the schemes for BIM Qualification Models

Opportunities for collaboration

The deliverables net-UBIEP is ready to share are:

- Report on existing BIM professional profiles
- Report on Roles of Target Groups in the Building Life Cycle and their role in NZEB implementation
- Maps on NZEB and BIM competences for target groups
- First report on CEN existing standards
- Report on CEN existing standards and standardization landscape
- Draft for the standardization of training scheme
- Information Materials for Public Administration
- Information materials for technicians
- Information materials for owners
- Information materials for professionals

15.3.4 BIMEET

The European Construction sector is facing unprecedented challenges to achieve ambitious energy efficiency objectives, in a context dominated by reduced investments, search for cost effectiveness and high productivity. Moreover the industry is experiencing its digital revolution, with Building Information Modeling (BIM) approach gaining significant interest across Europe. Member states implement very different approaches through regulations and maturity targets, which always face the traditional low-tech and informal practices of construction businesses (a sector dominated by SMEs).

BIMEET project aims to leverage the take-up of ICT and BIM through a significant upgrade of the skills and capacities of the EU construction workforce. This project is built around a strong consortium relying on educational and research & technology expertise, robust experience of accrediting bodies, training supply chain and a wide engagement of industry led best practice.

Through its actions the project will (a) pave the way to a fundamental step change in delivering systematic, measurable and effective energy efficient buildings through BIM training; (b) promote a well-trained world leading generation of decision makers, practitioners, and blue collars; (c) establish a world-leading platform for training. Its principal outputs are 1) a skills matrix related to BIM and energy efficiency, harmonized thanks to EQF standard, and 2) a training platform contributing to disseminate the results.

Opportunities for collaboration

The deliverables BIMEET is ready to share are:

- BIM for energy efficiency requirements capture
- BIM for Energy Efficiency required roles and skills
- Definition of responsibilities and roles for BIM & Energy Efficiency
- Definition of learning outcomes in the European level
- BIMEET Training Repository platform
- BIMEET training platform for the design and recommendation of BIM/EE courses

BIMEET platform aims to comprise a representative (if not exhaustive) set of training modules across EU which focus on BIM integrated with EE topics. Therefore, we would be very happy to liaise with

databases implemented in the other projects in order to integrate such initiatives in BIMEET's repository thus demonstrating the EU-wide potential in terms of training available.

BIMEET strongly focus on the calculation of Energy Performance Certificates from BIM, and will implement it for our 5 partners countries LU, FR, UK, GR, FI. The team is very open to share the methodology with other interested countries. Specific training (including online) is expected.

15.4 General comments

The use of BIM to establish minimum environmental criteria for new buildings and deep renovation of existing building could be also investigated. Green procurement foresees the use of green products. The use of BIM to investigate new environmentally friendly materials or to use materials produced locally (Km 0) for the future built environment could be investigated as BIM is more and more integrated with GIS and IoT.

We could prepare a survey with google drive to start sharing the net-UBIEP matrix of competences among the partners of all the four projects to agree on the main competences for each target. We should do that before the Dusseldorf meeting in order to be ready to propose a solution that suites all.

I also have a personal view that I would like to share: in many cases we are dealing with new competences and not with new profiles. This means that, for instance, the officers in the public administrations need to learn how to manage digital projects and to establish what this means when evaluating a refurbishment project in BIM. Therefore the market more than requiring new professional profiles requires new competences for existing profiles.

The competences could be certified in different way depending if the person is in charge of the development of the BIM model or in checking the BIM model against predetermined rules/values.

The use of bSI qualification system would imply the agreement on the followings items:

- a) Develop transversal learning outcomes valid for any target starting with the 3D matrix developed by net-UBIEP and others (BIMEET)
- b) Develop, if required, specific learning outcome for the different targets
- c) Develop the training materials for each target and for each phase of the building lifecycle starting with the information material produced by net-UBIEP and/or others
- d) Develop the qualification schemes based on the learning outcomes identified in the points a and b.
- e) Ask bSI the procedures to add this additional module to the existing bSI individual qualification

15.5 Future Collaborative Plan and Timescale

Work in progress.
